Description

Create a Node XML document. Enable synchronization for the MN by setting Synchronization=True in Node Document. MN operator calls CNRegister.register(). DataONE reviews the node document, then sets the node status to Approved (LDAP). Northwest Knowledge Network

NKN manages diverse collections of research data across many disciplines, with a strong emphasis on earth science, ecology, environmental, climate, and hydrology. We focus on archiving data specific to Idaho and the Pacific Northwest region. Much of our data is collected under recent or current federally funded grants such as NSF EPSCoR, USDA REACCH, or USGS Climate Science Center. Our largest data collections include raw and processed regional LiDAR products, downscaled climate scenario data (netCDF), and legacy stream ecology datasets.
