### History

#### #1 - 2015-05-14 16:03 - Dave Vieglais

It is often necessary to retrieve a list of synchronized objects from the CN to verify MN functionality. However, it is not currently possible to limit list objects to a specific NodeID, and so the solr index is typically used to provide the list. Since listObjects is more directly related to the actual synchronized content, it may be more accurate in some cases to use this service over search or query. It would also enable comparison of results in the index vs not.
