Description			
From running Architecture tests in d1_integration:			
<ol style="list-style-type: none">1. MN and CN getLogRecords in the documentation are describing the event parameter as type Event, instead of String (changed for V2)2. listObjects number of parameters? -3. CN.search - queryType should be in path, not specified in implementation-3. CN.updateAccount, expects 3 parameters, got 24. CN.updateSystemMetadata - probable problem with building parameters... -6. MN.view / CN.view - parameter 'theme' is not in the expected location (path).5. CN.getPackage - parameter 'packageType' is not in expected location (path).-			
problems could be either in the documentation or the implementation.

- Description updated

CN.view, MN.view, CN.search, and MN.getPackage are all ok - the test didn't know how to find method parameters when they were not at the end of the path.
