Story Points:	
Description Several changes were made to the types schema to add in support for arbitrary key-value pairs in the Node Registry. Implementation of this functionality needs to be tested. For example: <ul style="list-style-type: none">• adding latitude and longitude values• store BinHex encoded images (e.g. member node icons)

Tests are written but we need a way to clean up after the tests (since we can't through the API - CN.updateNodeCapabilities() can be reverted easily, but CN.register() can't). We'd need an ldap script to delete the node registration and also need to clear hzNodes.
