Target version:	
Story Points:	
Description	
It looks iike GMN uses non-standard certificate locations for server certs.	
Maintenance would be easier if the standards locations were used, unless there is some other reason to not do so.	
Server certificate should be installed in /etc/ssl/certs	
Server certificate key should be installed in /etc/ssl/private	
Server certificate chain cert should be in /etc/ssl/certs	
e.g. for the dataone test wild card serve cert:	
SSLCertificateFile /etc/ssl/certs/.test.dataone.org.crt	
SSLCertificateKeyFile /etc/ssl/private/.test.dataone.org.key	
SSLCertificateChainFile /etc/ssl/certs/geotrust_intermediate.crt
