Story Points:				

Description

When registering a member node (Metacat) I see that the node.subject seems to be modified and an extra "urn:node" is prepended to the the subject DN. Here are the log entries from the CN:
20150827-10:59:55: [DEBUG]: updating node attribute: subject=CN=urn:node:urn:node:mnDemo2,DC=dataone,DC=org [org.dataone.cn.ldap.NodeAccess]
20150827-10:59:55: [DEBUG]: updating node attribute: subject=cn=urn:node:mnDemo2,dc=dataone,dc=org [org.dataone.cn.ldap.NodeAccess]

History

#1 - 2015-08-27 18:47 - Ben Leinfelder

- Status changed from New to Rejected

- translation missing: en.field_remaining_hours set to 0.0

Was an issue on Metacat side - stale configuration value was sending the prepended text in the Node.subject list.
