Description

Need to add a configuration for the dev-2 environment to the postinst script for dataone-cn-portal.

Existing entries:

configure the CILogon skin, default to PRODUCTION

Note that the current configuration uses the same skins for stage and stage2, and sandbox and sandbox2.

Requested support for additional skin values and mapping to appropriate CN addresses:

Hi Terry,

If convenient, I would like to add support for three additional skin values:

DataONEDev2 - cn-dev-2.test.dataone.org

DataONESTage2 - cn-stage-2.test.dataone.org

DataONESandbox2 - cn-sandbox-2.test.dataone.org

As you might surmise, these are all additional test environments used by DataONE. Their account management is separate from other environments, so support for the additional skins is necessary to ensure complete test coverage is available.

Please let me know if you require any additional information.

thanks,
Dave V.

Updated the postinst script. The Myproxy ID can be shared across test environments because we share the same public key (from public wild card *.test.dataone.org certificate). Will close when we hear back from CILogon that the skins have been configured on their end.

- *translation missing: en.field_remaining_hours set to 0.0*

CILogon has configured the other skins now.
