Description

Multiple (366) non-discernable errors (see attachment) with message only stating "Cline is shutdown" occurred on 14 Oct 2015 on cn-stage.test.dataone.org (cn-stage-ucsb-1); sampling of objects/system metadata indicate all is retrievable from the MN https://dataone-dev.ecoinformatics.org.au/mn. This error had also occurred (24 events) for urn:node:mnTestLTER.

For example:

cn-synchronization.log.1-[ERROR] 2015-10-14 11:33:02,749 (TransferObjectTask:write:606)
Task-urn:node:mnTestAEKOS-aekos.org.au/collection/nsw.gov.au/nsw_atlas/vis_flora_module/ABERBALDIE.20150515
cn-synchronization.log.1:Client is shutdown.

History

#1 - 2015-10-20 14:46 - Robert Waltz

This looks like a hazelcast client error. It may be worth it to shutdown processing and indexing and restart tomcat, the start up the daemons again.
