Target version:	CCI-2.0.0		
Milestone:	CCI-2.0	**Story Points:**	
Product Version:	*		

Description

There's a bunch of content in sandbox environment that no longer has an authoritative member node. This needs to be completely purged.

The process to purge an object is something like:

1. call delete on every node that holds a replica
2. remove the entry from the postgres identifiers table on each cn
3. remove entries from the solr index
4. remove entries from the solr log index
