

CN REST - Bug #7489

processing daemon common-logging misconfigured

2015-11-16 16:32 - Robert Waltz

Status:	New	Start date:	2015-11-16
Priority:	Normal	Due date:	
Assignee:	Robert Waltz	% Done:	0%
Category:	d1_cn_process_daemon	Estimated time:	0.00 hour
Target version:			
Story Points:			
Description the commons-logging.properties file appears misconfigured. It is missing the line: org.apache.commons.logging.Log=org.apache.commons.logging.impl.Log4JLogger Hopefully, adding this line will allow all the apache commons logging calls to go to the log4j loggers.

Didn't work. We need to revise our logging strategy.

- Target version changed from CCI-2.0.2 to CCI-2.1.0
- Status changed from In Progress to New
- % Done changed from 30 to 0

Initial work in a test executable showed that altering the classpath in the MANIFEST.MF allowed for apache commons-logging framework to discover the commons-logging.properties file contained within the d1-process-daemon shaded jar file. Formal testing of d1-processing daemon did not result in the same behaviour and commons-logging messages continued to default to STDOUT and STDERR.

Furthermore, changing the inclusion of testing jars from the compile scope to the test revealed a classloader issue with BouncyCastle. The issue is initially described in bug report [#7535](#)
