Description			
Two issues with the tagged version 2.0 type schema:			
1. The v2 tagged schema for v1.1 uses the repository trunk location of the v1 schema for import.			
2. The dataoneErrors schema is malformed and declares a type that duplicates a type defined in v1 types.			
Neither of these issues should impact the Java code since correcting (1) does not change functionality and (2) is only used by Python.
