Description

The docs at

http://jenkins-1.dataone.org/jenkins/job/API%20Documentation%20-%20trunk/ws/api-documentation/build/html/apis/CN_APIs.html#CNCore.reserveldentifier indicate that the 'key' for the identifier to reserve is 'id', when it should actually be 'pid'.

Specifying a request with id (see attached bash script) produces the error:

```
<?xml version="1.0" encoding="UTF-8"?>7091b0df-df6a-424e-b46c-4c31738f1936/d1:identifier<?xml version="1.0" encoding="UTF-8"?>
```

The given identifier is already in use: null
