

CN REST - Task #7571

Description for error code 401, detail code 4957 is misleading in some cases

2016-01-05 16:25 - Peter Slaughter

Target version:			
Story Points:			
Description When using CNDiagnostic.echoCredentials() with an expired authentication token, the returned message is: <?xml version="1.0" encoding="UTF-8"?> No credentials were received in the request. (Session was null) The description text in this case is misleading, because from the caller's point of view, credentials were provided, albeit invalid. Is it possible to determine the validity of the credentials, i.e. expiration status, and indicate that in the description? BTW, this same token did work correctly before it expired. A bash script is attached that recreates the error.
