

Python GMN - Task #7765

Add "logrotate" capability as part of the GMN deployment

2016-05-04 02:38 - Mark Servilla

Status:	New	Start date:	2016-05-04
Priority:	Normal	Due date:	
Assignee:	Roger Dahl	% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:			
Story Points:			
Description <p>GMN log content (gmnl.log, gmnl_replication.log, and gmnl_sysmeta.log) can be quite verbose and voluminous, causing filesystem congestion and viewing frustration. Most Linux derivatives support a system mechanism for automated log rotation, such as the "logrotate" application. Add "logrotate" capability as part of the GMN deployment, including appropriate documentation. See below for a sample "logrotate" script:</p> <pre>"/var/local/dataone/gmn/lib/python2.7/site-packages/service/*.log" { size=100M compress missingok notifempty }</pre>
