<b>Description</b>	
<i>from an email from Adam Shepherd 4/5/16:</i>	
I noticed at the search sandbox that the dataset title doesn't appear in the listing of results (See attached). Is there documentation that explains the mapping from metadata to display (or solr fields)? Maybe if I include a dc:description for each object in the ORE?	
<i>from an email from Mark Servilla 4/13/16:</i>	
Regarding the title - it appears that your title is embedded as part of a /gmd:indentificationInfo/gmd:MD_DataIdentification/gmd:citation/gmd:CI_Citation/gmd:title/gmx:Anchor element; I believe that DataONE is using the .../gmd:title/gmd:CharacterString element for mapping and indexing the title.	
<i>from an email from Adam Shepherd 4/13/16:</i>	
I think the NOAA Profile defines gmx:Anchor as a valid substitution for gco:CharacterString ( <a href="https://geo-ide.noaa.gov/wiki/index.php?title=Character_String_Extended_Types">https://geo-ide.noaa.gov/wiki/index.php?title=Character_String_Extended_Types</a> ), but we can change this on our end if you prefer.	
Please evaluate the use of the gmx:Anchor tag and accommodate as necessary in the ISO NOAA-variant stylesheet, OR if more appropriate, recommend alternative tag for title designation.

It looks like Jing added the additional xpath for ISO 211 title.

//gmd:identificationInfo/gmd:MD\_DataIdentification/gmd:citation/gmd:CI\_Citation/gmd:title/gmx:Anchor/text()

Not sure when this will be deployed in production - perhaps Jing can comment?
