Target version:	
Story Points:	
Description Currently, some HTTP headers are being set as integers, which causes later implicit string conversions. For instance, the Content-Length value gets an "L" at the end when the value does not fit in a native int. Instead, explicitly string format all headers. E.g.: <pre>headers['Content-Length'] = mmp_body.get_content_length()</pre> to <pre>headers['Content-Length'] = str(mmp_body.get_content_length())</pre>	

History
