Infrastructure - Task #788

Persistent paths in drupal web site

Milestone:		Story Points:		
Product Version	*			
Description				
There are several	paths to persistent areas in the drug	bal web site that are using drupal ic	dentifiers rather than aliases.	
For example, the	"About" link goes to:			
http://beta.nmeps	cor.net/node/8			

http://bota.http://bota

whereas a more logical URL would be:

http://beta.nmepscor.net/about

which would be defined as an alias, with the advantage that another version of the "about" page could exist in preparation for being flipped to the live version. This functionality is a core Drupal functionality through the path module: <u>http://drupal.org/handbook/modules/path</u>

Once the persistent locations have all been defined, the menus and other links should use the alias URLs rather than the Drupal node URLs.
