There isn't a hardcoded cn-ucsb-1.dataone.org link in any portal component (d1\_portal, d1\_portal\_servlet, or cn-buildout/d1-portal), but there is hardcoded baseurl to the round-robin url (cn.dataone.org) in d1\_portal\_servlet WEB-INF/client.xml:

<https://cn.dataone.org/portal/ready>

<https://cilogon.org/oauth>

<https://cilogon.org/delegate>

PRIVATE\_KEY\_PATH

PUBLIC\_KEY\_PATH

DataONE

864000

MYPROXY\_ID

<!-- myproxy:oa4mp,2012:/client/501a796b5dab878f71665731028bd8a9 -->

```
<postgresql
  username="oa4mp"
  password="oa4mp"
  driver="org.postgresql.Driver"
  host="cn.dataone.org"
  port="5432"
  schema="oauth"
  database="oauth"
  tablename="assets"
  prefix="oauth"
  useSSL="true">
  <assetStore/>
  <transactions/>
  <clients/>
  <clientApprovals/>
</postgresql>
```

## #3 - 2016-12-14 21:48 - Jing Tao

Here is the client.xml on cn-dev-orc which I just installed today:

<https://cn-dev.test.dataone.org/portal/ready>

<https://cilogon.org/oauth>

<https://cilogon.org/delegate>

/etc/ssl/private/.test.dataone.org.key.pk8

/etc/ssl/certs/.test.dataone.org.crt.publickey

DataONEDev

864000

myproxy:oa4mp,2012:/client/24a10c2cd8bda4e6b5cf244ab7532b2

<!-- myproxy:oa4mp,2012:/client/501a796b5dab878f71665731028bd8a9 -->

You see, in the host of postgresql, it always pointed to the ip address of 128.111.54.78 which is the cn-dev-ucsb-1. Since the machine is cn-dev-orc-1, we need it to point to the address of cn-dev-orc-1.

**#4 - 2016-12-15 18:45 - Rob Nahf**

- *Category set to d1\_portal\_servlet*
- *Status changed from New to Closed*
- *% Done changed from 0 to 100*

ben confirms that only the postgresql configuration should be changed.

(changing to host="localhost")

changes done in trunk. Need to copy to 2.3 branch
