

Infrastructure - Task #8128

Correct invalid formatIDs in production

2017-07-11 19:40 - Dave Vieglaiss

Status:	Closed	Start date:	2017-07-11
Priority:	High	Due date:	
Assignee:		% Done:	100%
Category:		Estimated time:	0.00 hour
Target version:	CCI-2.3.5	Story Points:	
Milestone:	None		
Product Version:	*		
Description			
Format IDs that contain a "+" were incorrectly represented in the format list as containing a space " " instead of the "+" character.			
Need to locate these and update their format ID.			
Affected FormatIDs are:			
image/svg xml -> image/svg+xml			
application/rdf xml -> application/rdf+xml			
application/vnd.google-earth.kml xml -> application/vnd.google-earth.kml+xml

commit;

#4 - 2017-07-18 16:31 - Jing Tao

After update the systemmetadata table on three cns, we need to evict them from hazelcast. Then read system metadata from a browser. The reading action will prompt the reindex SOLR.

I checked the three db and found we did have the 5 objects which had the wrong format id.

After updated the db on three cns, I evicted them from the hazelcast memory.
Then those objects' systemmetadta were read from a browser.

Now, we can find this link hit zero.
