Description			
Mike Frenock rom PISCO mentioned that the Hazelcast client in Metacat died, and as a result he was unable to access content until he restarted Metacat. He only discovered this by looking at the Metacat logs. He suggested it would be helpful if there was some indicator or notification if the hazelcast client stops working since it was very confusing. He has only noticed this happen once, so probably not a high priority, but perhaps something that should be clear in the Metacat documentation.
