Description

When querying the solr index and using a member node token (subject: CN=urn:node:ARCTIC,DC=dataone,DC=org; expires 2018-11-30 16:48:44) the solr query returns 0 result. The same query, when run with a "personal" token (and membership in the LDAP admin group) allows results to be returned from the query for my personal token (subject: http://orcid.org/0000-0002-2192-403X).

The query is run from bash:

token="eyJhbGciOiJSUzI1NiJ9.eyJzdWI...."
curl -v -X GET "https://arcticdata.io/metacat/d1/mn/v2/query/solr/?q=id:\"arctic-data.14419.1\"" -H "Authorization: Bearer $token "

The "member node" token does allow access to this pid for MNRead.get(), so it appears for this type of token, the privs aren't being honored for solr queries.
