Category:		Estimated time:	0.00 hour
Target version:			
Story Points:			
Description Custom nodes will start off by first registering in Sandbox. Nodes using an existing MN software will register in Stage. <ul style="list-style-type: none">• Node contact subject approved by D1 admin in DataONE LDAP.• Node software configuration - synchronization enabled if applicable.• Node registration document generated and submitted to Sandbox or Stage CN.• D1 Admin approves node registration on the Sandbox or Stage CN server.• Monitor and verify synchronization, indexing, search behavior.• MN approves display of information in test search interface (https://search-sandbox.test.dataone.org/#data or https://search-stage.test.dataone.org/#data) A note for custom implemented DataONE services: It's expected that development and testing will be more iterative. When satisfied with results in sandbox, repeat the process by changing target to cn-stage.
