<b>Description</b>			
<p>The default user on the script is uid=dataone_cn_metacat,o=DATAONE,dc=ecoinformatics,dc=org. However, it is only for the test environment (cn-dev, sandbox and stage). The user for the production environment is cn=dataone_cn_metacat,dc=dataone,dc=org. So we have to manually to change it when we use it on the production cns.</p> <p>We could probably add a few lines to that script to call hostname -f and check to see if it is a production CN, and change the Subject if so</p>
