

Infrastructure - Story #8470

Make the spring context of the d1_index_processor daemon more configurable

2018-03-02 20:56 - Jing Tao

<div>Status:New</div> <div>Priority:Normal</div> <div>Assignee:Jing Tao</div> <div>Category:d1_indexer</div> <div>Target version:CCI-2.3.10</div> <div>Story Points:</div>	<div>Start date:2018-03-02</div> <div>Due date:</div> <div>% Done:0%</div> <div>Estimated time:0.00 hour</div>
<div>Description</div> <div>In the IndexTaskProcessorDaemon class, which is the start point of d1-indexx-processor, the context is initialized from a file in the class path:</div> <div>context = new ClassPathXmlApplicationContext("processor-daemon-context.xml");</div> <div>The file, processor-daemon-context.xml, imports all the index sub-processor application files. This make very hard for us to add a new sub-processor since we have to rebuild a new jar file in order to include a new file. Instead, if we use the FileSystemXmlApplicationContext class and read the file path from a properties file, we can get more flexibility.</div>
