Description

Ensure that the production version of the MN is ready. This is either a new instance with production content, or the test instance that has been completely cleaned (content and logs).

- ! Disable Sync if re-using test software !
- Software Configurations / Node Document / System Metadata checks:
 - URI in node software config shows production version
 - o If applicable, adapter metadata reflects production URI too.
 - o System metadata reflects production URI
 - Target CN is production hostname.
- Register Contact Subject identity in production version of DataONE LDAP w/ Sign in Link at https://search.dataone.org
- D1 admin approves contact subject in production LDAP.
- Request production certificates with prod version of URI and download w/ NCEAS uid. Install.
