6/10: MN questions-
1. is there an issue related to the fact that metaGRIL, our instance of Metacat, acts as a data registry. In other words, we are at the moment concentrating more on metadata than data itself
It's not a problem if they expose more metadata than data, since other repos are doing that as well. It is important that if they choose this path, that a link to where the data can be accessed programmatically is provided in the metadata.

2.rough estimate of the annual amount (in time and money) we would have to grant to this project in terms of server maintenance and workforce.
Operational cost is really no more than operating Metacat. Perhaps a couple hours per year for basic checks.
