Description

Rossdm reported on slack:

Hi @roger, I think there's been a regression - the "Download All" link used to work but now it's running into an `Access-Control-Allow-Origin` error.

https://search.dataone.org/view/10.24431_rwlk31v_201947202918

Access to XMLHttpRequest at 'https://dataone.researchworkspace.com/mn/v2/packages/application%2Fba git-097/25cb14a4-2764-42c7-95d0-82a3ad277eab' from origin 'https://search.dataone.org' has been blocked by CORS policy: Response to preflight request doesn't pass access control check: The value of the 'Access-Control-Allow-Origin' header in the response must not be the wildcard '*' when the request's credentials mode is 'include'. The credentials mode of requests initiated by the XMLHttpRequest is controlled by the withCredentials attribute.

History

If you click the download button at this page:

<https://search.dataone.org/view/doi:10.5063/F15X2773>

It works. So I am thinking the member nodes's apache configuration has the CORS issue.

#2 - 2019-05-28 23:58 - Roger Dahl

- % Done changed from 0 to 100

- Status changed from New to Closed

You were right Jing, it was a CORS issue in GMN. Fixed.
