<b>Target version:</b> Release Backlog	
<b>Story Points:</b>	
<b>Description</b> As a developer, when a member node de-implements the "GET ../object/{\$GUID}" method (or stops being a member node), I want to make sure that resolve does not hand out urls to that member node.  Although we stated that a member node that doesn't implement the get method should not be on the replica list in the systemMetadata, we haven't implemented logic to update metadata when a MN diminishes its capabilities in this way.  Depending on where we want to optimize efficiency, keeping faulty links out of resolve responses can be done either via update to the systemMetadata objects themselves at change of node status, or filtered out from the <a href="#">ObjectLocationList</a> by resolve at request time.
