Description We have a new d1_portal jar release which addresses the issue that restarting tomcat in CNs is needed when the LE certificates are renewed in CNs. The new d1_portal jar file has been deployed to dataone-cn-portal. However, the component dataone-cn-rest was overlooked. We need to deploy it there as well. Yesterday, we did a hack fix in CNs when we restarted tomcat - dropped the d1_portal-2.3.2.jar file there. So now it should work. But we still need a formal release.
